To: Daniel Hennen <Daniel.Hennen@noaa.gov>, Chris Legault <chris.legault@noaa.gov>

a neat way to view the connections in your shiny App:

1. type `options(shiny.reactlog=TRUE)` in the console
2. run your app
3. when you close your app, type: `showReactLog()` in the console; use the right arrow to advance through each action

also, reactivities on a tab that is not being used will be suspended by default. you can override this with this command in the server code:

`outputOptions(output, "data", suspendWhenHidden=F)`
